# EXP - 8 WIREFRAME USING BALSAMIQ

## AIM

To design a simple mobile app wireframe for a music streaming application called **BeatFlow** using Balsamiq.

## OBJECTIVE

- To create a basic mobile UI for music streaming
- To design simple screens with clear navigation
- To represent user flow using a storyboard

## TOOLS USED

- Balsamiq Wireframes

## DESCRIPTION

BeatFlow is a music streaming app that helps users:

- Browse songs
- Play music
- Create playlists
- Track listening activity

The wireframe is designed in low-fidelity using simple UI components like buttons, text fields, lists, and icons.

## SCREENS INCLUDED

1. Login Screen

- Email & Password
- Login button

2. Home Screen

- Search bar
- Recommended songs
- Playlist section

3. Music Player Screen

- Song title
- Play / Pause button
- Next / Previous

4. Playlist Screen

- List of songs
- Add / Remove option

5. Profile Screen

- User info
- Settings
- Logout

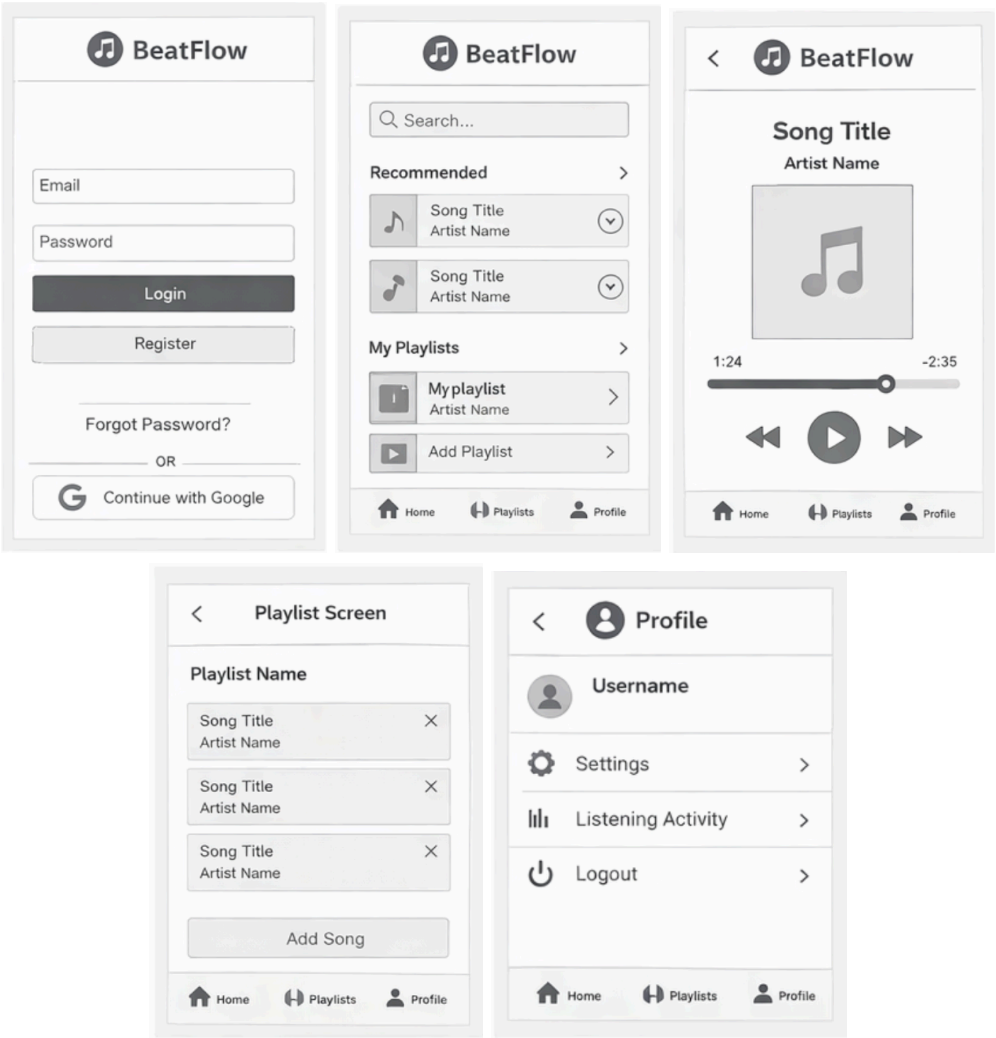
## USER FLOW

Login → Home → Music Player → Playlist → Profile

Arrows are used in the storyboard to show this flow.

## FEATURES

- Simple and clean design
- Easy navigation
- Music browsing and playback
- Playlist management



# RESULT

The BeatFlow music app wireframes were successfully designed, representing key screens and user flow. The layout ensured simple navigation and clear structure, improving usability and overall user experience.
