EXPERIMENT – 4
UI/UX PROTOTYPE

AIM:

To design and develop a mobile application prototype using Proto.io that incorporates both familiar and innovative navigation elements and evaluates the usability of the interface.

INTRODUCTION :

User Interface (UI) and User Experience (UX) design play an important role in developing user-friendly mobile applications. A well-designed interface helps users interact with the system easily and improves usability.

In this experiment, a prototype of a Messaging Application is designed using Proto.io. The application includes a Login Screen and a Chat Interface Screen. The design combines familiar navigation components with modern UI elements to improve user interaction.

OBJECTIVE :

1. To design a mobile application prototype using Proto.io
2. To include familiar navigation elements in the interface
3. To introduce innovative navigation features
4. To design an interactive messaging interface
5. To evaluate usability for different users

TOOL USED :

Proto.io – A cloud based prototyping tool used to design interactive mobile interfaces.

DESCRIPTION OF THE PROTOTYPE :

The messaging application prototype consists of three primary screens: **Login Screen, Chat List Screen, and Profile Screen**.

Login Screen

The Login Screen provides authentication access for users to enter the messaging application.

Features:

- Application title and branding
- Username input field
- Password input field
- Login button
- Light pink background theme for a clean and modern interface

Familiar Navigation Elements:

- Username field
- Password field
- Login button

These elements follow standard login design patterns commonly used in mobile applications.

Chat List Screen

The Chat List Screen displays the list of conversations available for the user.

Features:

- Search bar to find contacts
- Profile pictures of contacts
- Chat list showing recent conversations
- Last seen or active status for each contact
- Chat contacts

This screen allows users to quickly view and access their conversations.

Profile Screen

The Profile Screen displays the personal profile information of the user.

Features:

- Username: **shru.here**
- Profile picture display
- Number of posts
- Followers count
- Following count
- Message indicating **“No posts yet”**

This screen allows users to manage and view their personal profile information.

FAMILIAR NAVIGATION ELEMENTS

The following familiar navigation components are used in the prototype:

- Login form with username and password fields
- Chat list layout similar to common messaging apps
- Profile icon and user profile page
- Search bar for finding chats
- Last seen or active status indicators

These elements are intuitive and commonly used in messaging applications, making the interface easy to understand.

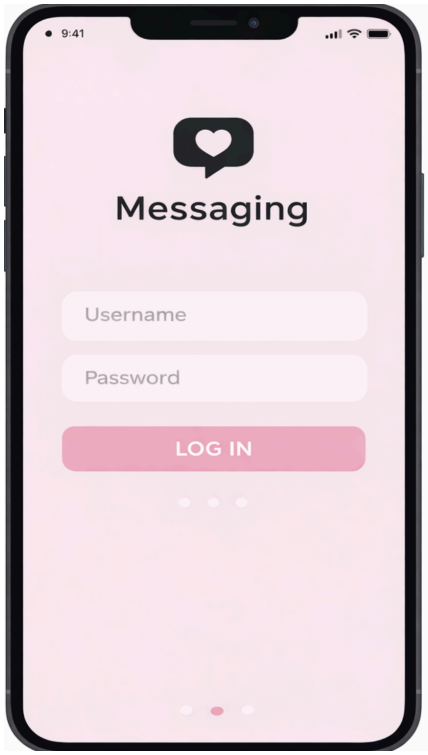
UNFAMILIAR / INNOVATIVE ELEMENTS

The prototype also includes some modern UI elements that enhance the user experience:

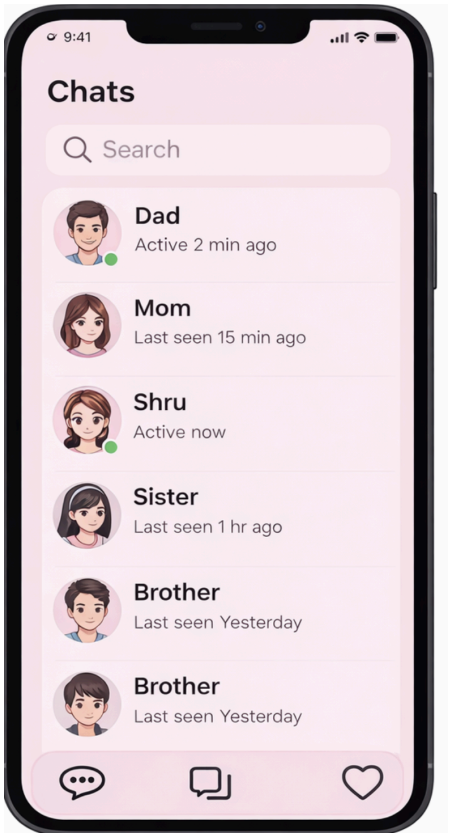
- Minimal chat preview interface showing only last seen time
- Clean light pink themed design for improved readability
- Simplified chat layout displaying only essential information
- Profile page showing follower statistics and account information

These design elements make the interface visually appealing while maintaining simplicity and ease of use.

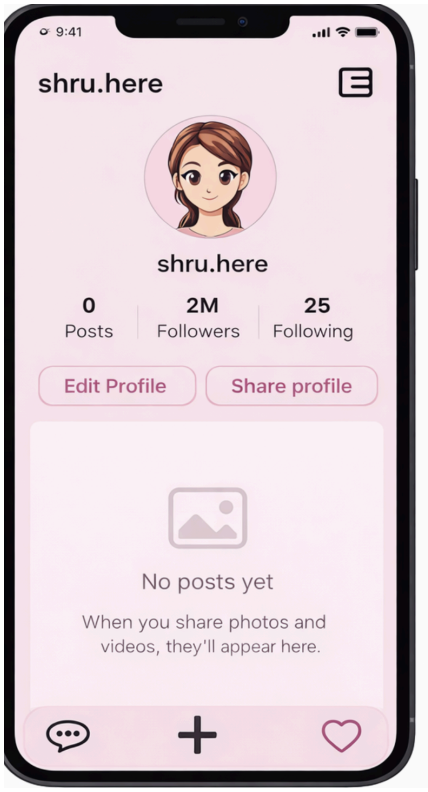
OUTPUT :



9:41
Messaging
Username
Password
LOG IN



9:41
Chats
Search
Dad
Active 2 min ago
Mom
Last seen 15 min ago
Shru
Active now
Sister
Last seen 1 hr ago
Brother
Last seen Yesterday
Brother
Last seen Yesterday



RESULT :

The messaging application prototype successfully integrates familiar navigation elements with simple and modern UI features. The prototype clearly demonstrates the login process, chat list interface, and user profile screen.

The application allows users to log in, view their chat conversations, and access their personal profile information easily. The clean layout and intuitive navigation help improve usability and provide a smooth messaging experience.

The prototype demonstrates how well-designed UI components and clear navigation structures can enhance the overall user experience in messaging applications.
